

quality. experience. inspiration.

WIGHTMAN
SPECIALTY WOODS

growing
since 1945

Three generations of commitment to quality.

In 1945, brothers Charles and Cyrus Wightman climbed into Charlie's Ford Model A pickup truck and drove to Laurens, New York for their first logging and milling job. With little more than an Ireland sawmill, a Cleartrack Crawler tractor and a drive to succeed, Wightman Specialty Woods was born.

Over the last six decades Wightman's has grown into a full-scale wood-manufacturing operation committed to bringing the highest quality wood products to the market. Exacting standards combined with impeccable craftsmanship have created Wightman's reputation as one of the region's top resources for solid wood materials.

With all phases of the manufacturing process completed on-site in Portlandville, New York, Wightman's ensures customers superior quality wood materials.

The process

- Raw materials are sourced from within 60 miles of Wightman's mill.
- Bark is removed and logs are sawn into boards of lumber.
- All by-products of the sawing process are utilized in operations at Wightman's or are sold to local businesses.
- Lumber is dried in on-site kilns.
- National Hardwood Lumber Association standards are used to determine lumber grade.
- Lumber is processed through state-of-the-art moulding equipment to shape finished materials.
